                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1446 TTTCCCAACAACCAGGACGCAGAAGAGG..
                                                                                                                                                                                                                                                                                                                                                                                                                                                complete sequence against a peptide database and plant EST databases at TIGR, and manual curations based on those analyses. Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as 'unknown' proteins. Genes without protein or EST similarity, that are predicted by two or more gene prediction programs over most of their length are annotated as 'hypothetical' proteins. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE/). Simple repeats were identified by transcan-ser.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Direct Submission

On Dec 17, 1999 this sequence version replaced gi:4512656.
The sequence and annotation of chromosome 2 were merged from those of the individual clones on this chromosome after removing overlaps. For detailed information, please see the TIGR web site (http://www.tigr.org/tdb/at/at.html).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Arabidopsis thaliana

Sequence from clones F14N22, F7D19. AC006931 AE002093
AC006931.5 GI:6598641
We thank the CSHL/WashU/ABI consortium for sequencing BAC clones F6523, F5J6, T17A5, and T13L16, the ESSA group for sequencing clone F13D4, and Scott Jackson, Jiming Jiang, Klaus Meyer, Eric Richards and Satoshi Tabata for helpful assistance. In addition, we would like to thank the TIGR Bioinformatics Department, especially Lixin Zhou, Hanif Khalak, Michael E. Heeney, Lily Fu. Feng Liang, Jeremy Peterson, Michael Holmes, and Delwood Richardson for software and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               prediction programs including GRAIL (ftp://arthur.epm.ornl.gov/pub/xgrail), Genefinder (Phil Green, University of Washington), Genscan (Chris Burge, http://gnomic.stanford.edu/GRNSCANW.html), and NetPlantGene (http://www.cbs.dtu.dk/services/NetGene2/), searches of the
                                                                                                                                                                                                                                                                                                                                            http://ftp.genome.washington.edu/RM/RepeatMasker.html). Genes are numbered from the top to bottom of the chromosome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Genes were identified by a combination of three methods: Gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Lin,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nature 402 (6763), 761-768 (1999) 20083487
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence and analysis of chromosome 2 of the plant Arabidopsis

                                                                                                    This nucleotide sequence encodes the cytochrome zP450RAI of the zebra fish. Its expression is dependent on the presence of retinoic acid (RA). The retinoid-regulated genes such as the inducible cytochrome P450RAI gene specifically metabolises a derivative of the RA. The cytochrome P450 gene in general produces enzymes involved in the oxidative metabolism of endogenous and exogenous compounds. The cytochrome P450 nucleotide sequence can be used to induce or suppress the expression of its protein. P450RAI is highly induced by RA in cell lines and tissues. This allows for development of a drug screen using promoters and nucleotide sequences to identify
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cytochrome zP450RAI cDNA sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This cDNA clone codes for a novel zebrafish retinoid metabolising composed (see AAW44159) designated zp450RAI. The encoded protein is a cretinoid oxidase that has the ability to hydroxylate retinoic acid cat the 4 position of the beta-ionone ring and is inducible in composed to retinoic acid. To isolate the clone, composed to retinoic acid were compared using a differential display proceed to the composed composed (see AAV12213) was used to screen composed (see AAV12205) pa50RAI clones have also been identified. The composed (see AAV12205) pa50RAI clones have also been identified. The collated clones can be used in the recombinant production of pa50RAI proteins. Antisense nucleic acids can be used in a claimed composed for inhibiting retinoic acid hydroxylation for the treatment composed for inhibiting retinoic acid hydroxylation for the treatment composed to the head and/or neck, non-small cell lung carcinomas, basal cell carcinomas, acute promyelocytic leukaemia, skin cancer, and collation of collation collations. Promoter sequences (see AAV12206-08) are also collations.

                                                                                                                                                                                                                                                                                                                                                                                                                                  251
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         201
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                151
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 metabolism of endogenous and exogenous compounds. The cytochrome P450 nucleotide sequence can be used to induce or suppress the expression of its protein. P450RAI is highly induced by RA in cell lines and tissues. This allows for development of a drug screen using promoters and nucleotide sequences to identify drugs which are useful for reducing the catabolism of RA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This nucleotide sequence encodes the human cytochrome P450RAI. Its expression is dependent on the presence of retinoic acid (RA). The retinoid-regulated genes such as the inducible cytochrome P450RAI gene specifically metabolises a derivative of the RA. The cytochrome P450 gene in general produces enzymes involved in the oxidative metabolism of endogenous and exogenous compounds. The cytochrome

XX Claim 15; Pa database, and an isolated clone was used to screen a cDNA library generated from an NT2 cell line treated with retinoic acid. The hp450RAI gene has been localised to 1023-24. Zebrafish, human and mouse p450RAI cDNA clones (see AAV12203-05) are claimed. They can be used in the recombinant production of P450RAI. Antisense nucleic acid by the used in a claimed method for inhibiting retinoic acid hydroxylation for the treatment of cancer, actinic karatosis, oral leukoplakia, secondary tumours of the head and/or neck, non-small cell lung carcinomas, basal cell carcinomas, acute This cDNA clone codes for a novel human retinoid metabolising protein (see AAW44160) designated hp450RAI. The encoded protein is retinoid oxidase that has the ability to hydroxylate retinoic acid at the 4 position of the beta-ionone ring and is inducible in epithelial cells exposed to retinoic acid. To isolate the clone, actinic keratosis; oral leukoplakia; head tumour; neck tumour; non-small cell lung carcinoma; basal cell carcinoma; acute promyelocytic leukaemia; skin cancer; acne; psoriasis; ichthyosis; therapy; diagnosis; screening; cytochrome P450; ss Retinoid metabolising protein; P450RAI; retinoid oxidase; retinoic acid; human; inhibitor; antisense; cancer; actinic keratosis; oral leukoplakia; head tunour; neck tunour; n Human retinoid metabolising protein hP450RAI cDNA promyelocytic leukaemia, skin cancer, and premalignancy associated with actinic keratosis, acne, psoriasis and/or ichthyosis. Promoter sequences (see AAV12206-08) for the P450RAI genes are als zebrafish P450RAI was used to search an expressed sequence tag Retinoid metabolising protein - useful to develop products to treat, e.g. cancer, actinic keratosis, oral leukoplakia, acne, psoriasis or Page 55-57; 110pp; English (first entry) QUEENS KINGSTON 96US-0724466. 96US-0667546. 97WO-CA00440.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This nucleotide sequence encoding an isoform of cytochrome P450RAI. Its expression is dependent on the presence of retinoic acid (RA). The retinoid regulated genes such as the inducible cytochrome P450RAI gene specifically metabolises a derivative of the RA. The cytochrome P450 gene in general produces enzymes involved in the oxidative metabolism of endogenous and exogenous compounds. The cytochrome P450 nucleotide sequence can be used to induce or suppress the expression of its protein. P450RAI is highly induced by RA in cell lines and tissues. This allows for development of a drug screen using promoters and nucleotide sequences to identify drugs which are useful for reducing the catabolism of RA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 1998-077193/07.

This cDNA clone codes for a novel mouse retinoid metabolising protein (see AAW44160) designated mp450RAI. The encoded protein is retinoid oxidase that has the ability to hydroxylate retinoic acid at the 4 position of the beta-lonone ring and is inducible in epithelial cells exposed to retinoic acid. The clone was isolated from a retinoic acid-treated P19 teratocarcinoma cDNA library using human P450RAI cDNA (see AAV12204) as probe. Zebrafish, human and mouse P450RAI cDNA clones (see AAV12203-05) are claimed. They
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1416

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAA60752 standard; cDNA; 2124 BP
                                                                                                                                                                                                                                                                                                                                                                                       The present sequence encodes a human protein, designated PSEC64, which is related to neuron growth. The PSEC64 protein and its gene can be us for the development of a preventive agent for use in the treatment of diseases in which nerves are involved.

Another genomic clone (see AAV12215) is also provided, as well as a cDNA clone (see AAV12204) that includes a coding sequence for the full-length hP450RAI exidase composed in (see AAW44160). The encoded protein is a retinoid oxidase contains the ability to hydroxylate retinoic acid at the 4 position of the beta-lonone ring and is inducible in epithelial cells composed to retinoic acid. The hP450RAI gene has been localised to composed to retinoic acid. The hP450RAI gene has been localised to composed to retinoic acid. The hP450RAI gene has been localised to composed to retinoic acid. The hP450RAI gene has been localised to compose the combinant of anylogation of P450RAI. Antisense nucleic acid scan be used in a composed to a cancer, actinic keratosis, oral leukoplakia, secondary tumours of the head and/or neck, non-small cell lung carcinomas, composed to cancer, actinic keratosis, oral leukoplakia, secondary composed compose
                                                                                                                                                                                                                                                                                                                                                                               alignment_block:

                                                                                                                                                                                                                                            The present sequence encodes Arabidopsis thaliana cytochrome P450-type hydroxylase. The hydroxylase can be used to identify brassinosteroids or brassinosteroid inhibitors, useful to produce plants with modified physiological and/or phenotypic characteristics. The modified plants may show, e.g. stimulation of growth, increased cell elongation, increased wood production, accelerated seed germination at low temperatures, an increase in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2614
                                                                                                                                          dry weight, repressed anthocyanin production during growth in ligh and/or inhibited de-etiolation which is induced, e.g. by cytokinin in the dark or an increase in stress tolerance.
